

Professional services—BloxOne DDI QuickStart service overview

Realize the full value of your Infoblox BloxOne DDI investment with configuration and deployment services

BloxOne DDI QuickStart* is intended to help quickly onboard new customers. This service addresses configurations within the Infoblox Cloud Services Portal, deployment of on premises hosts, and configurations of protocol data and services.

BLOXONE DDI SERVICE

BloxOne DDI centralizes the provisioning, management, and administration of DDI for enterprises with distributed environments. Mobile, IoT and cloud solutions are sensitive to latency and depend heavily on reliable DDI infrastructures. BloxOne DDI consolidates the visibility, administration, and control of distributed locations into a single interface, directs traffic to the closest SaaS entry point to improve application performance and ensures survivability of distributed locations in the event of lost connections to data centers. BloxOne DDI also utilizes DNS server group and access control list (ACL) templates and leverages an extensible microservices and container-based platform to simplify deployments, streamline operations and minimize overall total cost of ownership. A full complement of APIs is also available for secure, programmatic access to supported features throughout the solution.

FEATURES AND BENEFITS

- **Experienced engineers**
Infoblox experts who are familiar with all aspects of your solution bring focused engineering expertise and experience to the table. Assistance from our team optimizes efforts by allowing your staff to focus on service design and service operation instead of spending time researching technologies and products. This approach also helps you cut costs by lowering operational expenditures.
- **Proven methodology**
Infoblox has performed hundreds of projects just like yours using tried-and-true methodologies. Your project will follow a proven game plan from start to finish and get your Infoblox investment working and returning value for you as quickly as possible. In addition, we provide valuable experience to mitigate project risk at each phase and facilitate successful execution.
- **Customer focus**
Infoblox strives to help you understand every aspect of your Infoblox solution. Knowledge transfer and communication are our foundation, helping your staff refine, operate and scale your environment as you move forward.

*QuickStart service does not include data migration from legacy platforms. For those services, contact your Solutions Architect about a DDI Migration project.

THE FOLLOWING B1DDI COMPONENTS ARE CONFIGURED AS PART OF THIS QUICKSTART TO HELP YOU UNLEASH THE FULL VALUE OF YOUR INFOBLOX BLOXONE DDI*

Service	Description	Benefit
Cloud Service Portal Management	<ul style="list-style-type: none"> • Reviewing License Entitlements • Reviewing Platform Status & Dashboards • Managing & Configuring Role-Based Access Control 	Managing Role-based access control allows you to define user access based on roles and permissions.
Appliance Deployment	<ul style="list-style-type: none"> • On Prem Host Zero Touch Deployment • Token Creation • Appliance Provisioning & Service Activation 	Deploy hardware or virtual appliances you need to move your DDI Management to the cloud as quickly as possible.
Protocol Data Configuration for IPAM/DHCP	<ul style="list-style-type: none"> • IP Spaces • Address Blocks • Subnets • Ranges • Fixed Addresses • IPv4 Reservations • DHCP Config Profiles • Options Spaces • Option Groups • IPv4 Filters • HA Groups 	Configuring protocol data for basic DNS tasks can be a tedious, time-consuming process—especially if you’re upgrading your IPAM/DHCP from AD or manual processes. Having experienced engineers from Infoblox handle configuration ensures the process gets done correctly and on schedule.
Protocol Data Configuration for DNS	<ul style="list-style-type: none"> • DNS Views • DNS Config Profiles • DNS Server Groups • Authoritative DNS Server Group • Forward DNS Server Group • DNS Servers • Clear Cache • Properties (Assignment of Configuration Profile) • Access Control Lists • Named ACL • DNS Zone 	Moving DNS operations to the cloud with BloxOne will dramatically improve the performance of your SaaS- based applications such as Office365, Salesforce and others—but correct configuration is essential. Bringing Infoblox experts aboard to ensure all DNS configuration are executed correctly will not only ensure top performance, but it will also ensure shortest time to value.

*QuickStart service does not include data migration from legacy platforms. For those services, contact your Solutions Architect about a DDI Migration project.

Infoblox unites networking and security to deliver unmatched performance and protection. Trusted by Fortune 100 companies and emerging innovators, we provide real-time visibility and control over who and what connects to your network, so your organization runs faster and stops threats earlier.
